WARRANTY

All installations come with a five year workmanship warrantee and 25 year manufacturer's warrantee on network infrastructure cabling.

MAINTENANCE

We provide flexible maintenance SLA's to meet your operational requirements. This can range from a simple health check on your existing network through to a 24/7/365 fully tailored maintenance contract.

STRUCTURED CABLING SERVICES

Microtech Communications offers a complete design and installation service for structured cabling used for data, voice, building automation, video and control systems.

Whether you are modifying an existing network or installing a completely new system, our team of qualified engineers can support your project from the planning stages. By understanding your operational needs, we can help to ensure your network is correctly specified, scalable and delivers the robustness you expect from your hardware investment.

Cabling services include business networks, call centres, data centres and disaster recovery.

MAINTENANCE

We provide flexible maintenance SLA's to meet your operational requirements. This can range from a simple health check on your existing network through to a 24/7/365 fully tailored maintenance contract.

VOICE SERVICES

Microtech Communications offer a complete specification, installation and testing service for IP, UC and traditional phone systems for business.

Services include single and multi-site office installations and can include remote worker support through secure VPN. If your voice services are operated separately from your data cabling we can install and maintain your traditional block wiring or provide an integrated solution with your data network.

Our qualified engineers install reliable solutions that are future proofed using the latest training and technology.

OPTICAL FIBRE SERVICES

Microtech Communications offers a complete specification, installation and testing service for single and multi-mode optical fibre.

This industry leading technology offers excellent bandwidth and scalability to organisations where data transfer speeds are integral to infrastructure development. It is completely immune to EMI and RFI, making it ideal in environments susceptible to electrical and radio interference.

We are highly experienced in a diverse range of environments. Our qualified engineers are able to undertake a wide variety of installations using the most up to date training and technology. We offer a complete service or can simply supply engineers to assist your project.

MANAGED NETWORK SERVICES

Microtech Communications offers a range of managed services for SME and Enterprise organisations, supporting all aspects of Telephony and IT infrastructure.

Experts in networking and collaboration, we can guide you to the most appropriate technologies and integrate them seamlessly into your environment. Our managed network services help control your IT support costs, increase network availability and facilitate the evolution of your infrastructure to support operational needs.

If your network is down so is your business. System down-time can be extremely detrimental to both productivity and client confidence, which is why we offer a proactive service that can support you 24/7/365.

FACILITY SUPPORT SERVICES

Microtech Communications offers a wide number of facility support services to assist the changing operational needs of your business. Whether you need to relocate, expand to additional premises or simply add a new user to your network, we ensure a planned, coordinated process that can support businesses with the most complex of IT systems.

Our unified approach to project management ensures you receive optimum levels of service with minimal disruption to your business. We remove the challenges commonly associated with change to help your business to run smoothly and maximise operational performance.
